

Why Choose Family Media Manager?

Your Memories. Your Server. Your Rules.

True Privacy — No Corporate Access

When you share family photos on Facebook, Google Photos, iCloud, or similar services, you are uploading your most personal moments to servers owned by large corporations. Those companies use your data to train AI models, serve targeted advertising, and analyse your behaviour. Their terms of service grant them a broad licence to your content.

FMM is different. It runs entirely on a computer **you own**. No data ever leaves your home network unless you choose to expose it. No company can read, scan, or monetise your family's memories.

| Feature | FMM | Cloud Services |
|----------------------------------|-----------------|----------------------|
| Your data stays on your hardware | ✓ Always | ✗ Never |
| No AI training on your photos | ✓ Guaranteed | ✗ Usually trained |
| No targeted advertising | ✓ Zero ads | ✗ Core revenue model |
| No account required to run | ✓ Self-hosted | ✗ Mandatory account |
| You control who can see what | ✓ Full control | ~ Limited controls |
| Works without internet | ✓ Local network | ✗ Requires internet |
| No monthly subscription | ✓ Free forever | ~ Freemium / paid |
| Open to inspection | ✓ Your own PHP | ✗ Closed source |

Who is FMM For?

- ✓ Families who want to keep wedding photos, baby pictures, and home videos private
- ✓ Anyone uncomfortable with big tech companies scanning personal images
- ✓ Tech-savvy family members who can run a simple Windows or Linux installer
- ✓ Families spread across the world who want a shared private album
- ✓ People fed up with storage limits, paywalls, and changing privacy policies

Peace of Mind

With FMM, you never have to wonder whether a corporation has read your family's holiday snaps, whether a data breach has exposed your children's photos, or whether a policy change has made your content accessible to strangers. The server is in your home. You hold the keys.
